Art Unit: 1765

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 3 to 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lampert et al in view of Hayashida et al.

The Lampert et al reference teaches a method of polishing and oxidizing a silicon wafer. A silicon wafer is first polished by standard polishing techniques. Then a different aqueous solution is applied to the wafer. The solution contains an~~f~~ oxidization agent and alkali compound, note col. 2. The sole difference between the instant claims and the prior art is the specific compounds. However, the Hayashi et al reference teaches the claimed alkali compounds used on silicon substrates, the compounds can be organic and inorganic. It would have been obvious to one of ordinary skill in the art to modify the Lampert et al reference by the teachings of

Art Unit: 1765

the Hayasiha et al reference to use specific compounds in order to prevent the introduction of impurities onto the cleaned substrate.

Response to Applicants' Arguments

Applicant's arguments filed September 27, 1999 have been fully considered but they are not persuasive.

Applicants' argument concerning the Nakashima and Parissis is deemed moot in view of the new ground of rejections.

Applicants' argument concerning the Hayasiha et al reference is noted. However, the reference states that the alkali compounds can be either organic or inorganic, note, col. 4 line 5-7.
